# INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/DE 03/04036

2. The amendments submitted with the letter of 13 December 2004 introduce subject matter which, contrary to the requirement of PCT Article 34(2)(b), goes beyond the disclosure in the international application as filed. The amendments in question are as follows:

"a U-shaped and/or serpentine current channel"

There is no basis in the original application for the amendments submitted with the letter of 13 December 2004. These amendments have been ignored in the examination of the subject matter of claims 1 to 10 with regard to novelty and inventive step.

- 3. The application fails to meet the requirements of PCT Article 6 because the subject matter of claim 1 is not clear. The phrase "can be formed" in claim 1 is vague and unclear, and leaves the reader uncertain about the meaning of the technical feature referred to. The claimed subject matter is therefore not clearly defined (PCT Article 6).
- 4. The application fails to meet the requirement of PCT Article 33(2) because the subject matter of claims 1-3, 5, 6, 9 and 10 is not novel.
- 4.1 The subject matter of claims 1-3, 5, 6, 9 and 10 lacks novelty in the light of the disclosure of document D1 (see figures 2, 4 and 6, and the accompanying text). In D1 too, the electrode layer covers the current channel completely and also covers at least a part of the first electrodes measuring between 0 and 20 μm.
- 4.2 The subject matter of claims 1 and 2 lacks novelty in the light of the disclosure of document D2 (see figures 4 and 5, and the accompanying text), document D3 (see figure 1 and the accompanying text) and document D4 (see figure 1 and the accompanying text).

# INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/DE 03/04036

5. Dependent claims 4, 7, and 8 do not contain any additional features that would constitute subject matter involving an inventive step when combined with the features of any of the back-referenced claims, since structuring the semiconductor layer is a standard way to reduce crosstalk or leakage current (see, for example, document D7, figure 4 and the accompanying text; also document D8, figure 3 and the accompanying text).
